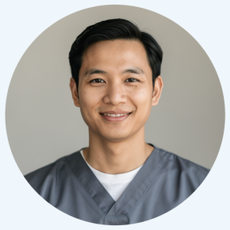
Meet Minh. He Learns and Proves Fall Prevention as a New Nurse.

Follow Minh, a newly hired nurse, through an illustrative seven-Step competency Path. A hospital could use this structure to turn the fall prevention teaching its nurse educators repeat with every new hire into one Path: he learns the hospital's policy, applies it to a sample patient, proves it in a skills check his educator signs off, and reflects on what to learn next. Each Step joins his continuing learning record.



Illustrative person (AI-generated)

Minh

Age 27

He has just joined a medical-surgical unit as a newly hired nurse.

Fall prevention is one of the competencies in his orientation.

His nurse educator could guide the next steps.

1

Video: Learn the unit’s approach

A short video from his nurse educator: why preventing falls matters on every unit, and how the hospital’s fall prevention program works.

2

Document: Read the fall policy

The hospital’s own fall prevention policy: the validated risk tool it uses, when to reassess, and how to build each patient’s prevention plan.

3

Image: Review universal precautions

A picture guide to the precautions that apply to every patient: call light within reach, bed low with brakes locked, nonslip footwear, and floors clear and dry.

4

Quiz: Check his knowledge

A short knowledge check on fall risk factors and prevention, with feedback on each answer so he can see what to review.

5

Web Embed: Apply it to a patient case

An interactive scenario with a sample patient: he identifies the fall risks and chooses the prevention steps the hospital’s policy calls for.

6

Form: Skills check with his educator

His nurse educator observes him complete a fall risk assessment and set up a patient room safely, then signs off the skills checklist in his record.

7

Form: Reflect and look ahead

A short reflection: how confident he feels, what he still has questions about, and what he wants to learn next. It joins his record for next year’s training.

Path completed

Minh’s record shows what he learned and proved.

Illustrative training Path. Competency is assessed by the hospital’s own educators.

Illustrative patient journey. For client and clinical review.
